

BURNING BEARD BREWERY

Description

The construction of the Burning Beard Brewery included a brand-new tasting room, brewhouse, equipment yard and restrooms. R&R installed an immense amount of high-tech brewing machinery including a 15BBL oversized steam powered brewhouse with 40BBL hot and cold liquor tanks, (5) 30BBL fermenters and (1) 30BBL brite tank which was installed with cellar controls by Chillitron. We also installed a filtration system with a RO water supply and a 520 sq. ft. cold box. In addition, we built an equipment yard with a 24HP dual compressor chiller and 47HP boiler.
